Typical Applications

The WFLV Flash tanks are installed in condensate return systems to separate off flash steam from hot condensate and neutralize pressure in condensate return lines. The flash steam may be used for low pressure heating applications or vented to atmosphere.

How to Size / Order

Use Table 1 to determine amount of Flash Steam that will be generated by the hot pressurized condensate. The percentage of Flash Steam formed is found where Condensate Pressure and Flash Tank Pressure intersect.

Multiply your Condensate Load by the decimal equivalent of the Flash Steam Percent to determine the amount of Flash Steam in lbs/hr. Then, use Figure 1 to determine Flash Tank Size required:

Example: Condensate Pressure: 100 PSIG
Flash Tank Pressure: 20 PSIG
Condensate Load: 8,000 lbs/hr
% Flash Steam: 8.7% from chart
Decimal Equivalent % Flash Steam = .087

$.087 \times 8000 = 696 \text{ lbs/hr of flash steam}$

Therefore Choose: 12" FLASH TANK

Note: All Watson McDaniel flash steam recovery vessels are supplied with ASME Section VIII Code Stamp.
